

How to Measure Your Size

* Please take your measurements in inches.

The Waist

We begin by buttoning up the jeans. We then lay the jeans flat with the top waist band evenly flat on the back. We measure from one side to the other keeping the jean flat & double the measurement.

The Hip

We measure 3 inches or 7.5cm from the crotch stitch. Then measure from side to side flat across the jean at this point.

Front Rise

After we lay flat and measure from crotch seam to top of jean with top button fastened.

Back Rise

Then we measure from crotch seam to top of the back of the jean.

Thigh

Then we measure from crotch seam to top of the back of the jean.

Knee

After we lay flat and measure 13 or 33cm from crotch down inside seam of jean. From here measure from one side of the jean to the other.

Hem Width / Leg Opening

Then with the jean flat, measure from one side of the leg opening to the other. with very heavy denim 18oz and above measure the entire circumference of the exterior of the hem using a measuring tape and divide by 2 for a more exact figure.

Inseam / Inside Leg

Finally we lay the jean flat with the inseam at the centre. Following the inside seam measure from the crotch to the end of the leg.
